

# Redron Jekyll Theme Introduction

Redron – Is a responsive premium jekyll theme. Developed with the latest Bootstrap Framework 5. Redron offers many various possibilities which will help you easily create a beautiful, stunning and unique website. Redron is the perfect jekyll theme for your next agency, software and startup website. It has a pixel-perfect design and clean coding which assures the highest quality standards. Inside the package there are HTML files of all pages optimized in order to perform in a simple and fast any customization.

# Jekyll Theme Deployment

---

To run our jekyll theme locally, navigate to the theme directory from your PC and run  
`bundle install`

command in git client app. to install the dependencies, then run  
`bundle exec jekyll serve`

to start the Jekyll server.

Here following some good resources to deploy jekyll :

- [Manual Deployment](#)
- [Automated Deployment](#) (Example: Travis CI, Circle CI, Buddy etc)
- [3rd Party Deployment](#) (Example : Aerobatic, CloudCannon, Github Pages, Kickster, Netlify, Static Publisher)

# Setup Jekyll Navigation Menu

---

Navigation will be visible in the top header area. You can control and edit the navigation from the `_data/navigation.yml`

data file. The current navigation links are:

```
navigation.yml
- title: home
  url: home
  submenu:
    - title: home gradient
      url: /home-gradient
    - title: home image
      url: /home-image
    - title: home video
      url: /home-video
- title: services
  url: services
- title: screenshots
  url: screenshots
- title: pricing
  url: pricing
- title: team
  url: team
- title: blog
  url: blog
- title: contact
  url: contact
```

You can add a title and a URL for each navigation item for the website. For example, if you want to add a link to the about page, you can append the following to the list.

```
navigation.yml
- title: about
  url: /about
```

# How to remove preloader from the theme?

---

If you want to remove the preloader animation completely from the theme, follow the steps bellow :

1) Open **\_layouts/default.html** file and then find the code and remove that from there.

```
<div id="preloader"></div>
```

02) Now open **assets/js/app.js** file and remove the following code from there to delete the preloader functionality from js.

```
app.js
/*-----
preloader
----- */

$(window).on('load',function(){
    var pre_loader = $('#preloader')
    pre_loader.fadeOut('slow',function(){$(this).remove();});
});

// meanmenu
$('#mobile-menu').meanmenu({
    meanMenuContainer: '.mobile-menu',
    meanScreenWidth: "992"
});
```

Still if you need any help to remove or change preloader feel free to [contact us](#).

Thanks

# Why my category / tag not wroking

---

If you are having issue with category / tag then follow the tips bellow :

**1)** Check the post configuration and make sure you are using the correct settings make for tags and categories.

For Tag :  
tags

For Category :  
categories

**2)** Check the text what you are using as category / tag. It should be english ( Bug Report Here : <https://github.com/sverrirs/jekyll-paginate-v2/issues/171> )

**3)** Make sure you wrote your tags and category with comma separated.

Example :

```
tags: [wordpress, jekyll, ghost, themeix]
```

# Disqus Comment Settings for Jekyll Themes

You need to change the shortname to use your own discuss comment system.

Open **`_includes/disqus_comment.html`** or **`_includes/comments.html`** file, and change the **XXXXX** value on line number 15 with your [Disqus account shortname](#).

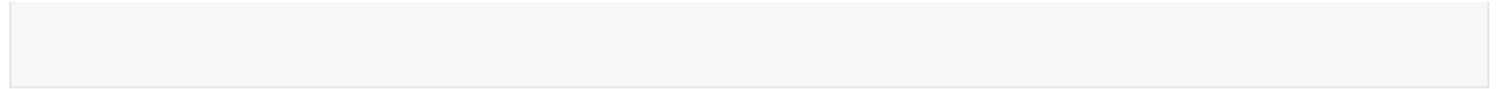

```
s.src = '//XXXXX.disqus.com/embed.js';
```

So, if your Disqus shortname is **example**, the final code above should be

```
s.src = '//example.disqus.com/embed.js';
```

```
<div id="disqus_thread"></div>
<script>

/**
 * RECOMMENDED CONFIGURATION VARIABLES: EDIT AND UNCOMMENT THE SECTION BELOW TO INSERT DYNAMIC VA
LUES FROM YOUR PLATFORM OR CMS.
 * LEARN WHY DEFINING THESE VARIABLES IS IMPORTANT: https://disqus.com/admin/universalcode/#confi
guration-variables*/
/*
var disqus_config = function () {
this.page.url = PAGE_URL; // Replace PAGE_URL with your page's canonical URL variable
this.page.identifier = PAGE_IDENTIFIER; // Replace PAGE_IDENTIFIER with your page's unique identi
fier variable
};
*/
(function() { // DON'T EDIT BELOW THIS LINE
var d = document, s = d.createElement('script');
s.src = 'https://XXXXX.disqus.com/embed.js';
s.setAttribute('data-timestamp', +new Date());
(d.head || d.body).appendChild(s);
})();
</script>
<noscript>Please enable JavaScript to view the <a href="https://disqus.com/?ref_noscript">comment
s powered by Disqus.</a></noscript>
<script id="dsq-count-scr" src="//XXXXXX.disqus.com/count.js" async></script>
```

That's all you need to setup Disqus from the theme side. If you get any issue feel free contact us.

# How does the testimonial work?

---

In that theme all the testimonial data comes from **\_data/testimonials.yml** file and you need to change the content from there.

For example :

```
testimonials.yml
- name: Mr. Joe
  image: /assets/img/review/1.jpg
  review: Themeix Live Chat option was really helpful for me. y.
  designation: General Customer
  rating: 4
```

Here following the details about the keys used there.

**name** : It will appear as testimonial author name.

**image** : It will be the profile picture of the testimonial author or person or the company.

**review**: That is the main content of testimonial

designation: It is basically the subtitle of a testimonial author

**rating**: it will display the star ratings in the frontend.

# How to change the FAQ content?

---

To change the FAQ content open **\_data/faqs.yml** and then change change the question, answer there.

Example :

```
faqs.yml
- question: World class creative experts team member?
  answer: When replacing a multi-lined selection of text
```
